

Principal Scientist- PepsiCo
Nutrition Exempt Level 10 #27539
Valhalla, NY

Full Time
Salaried

Job Description

Role Summary:

Support the development and implementation of nutrition strategies for PepsiCo with an emphasis on the global beverage business. Develop product guidance; translate nutrition science into product innovation and messaging opportunities; identify emerging science that will impact the global beverage business; and support new nutritional opportunities for the PepsiCo portfolio.

Key responsibilities:

- Partner with R&D and business teams to help with the creation of compelling nutrition strategies for the global beverage portfolio
- Provide in house nutrition science expertise to beverage business partners and other corporate functions
- Partner with R&D teams to identify and deliver compelling nutrition solutions that differentiate PepsiCo products and connects to long term research initiatives
- Effectively compile, synthesize, and communicate knowledge from multiple streams, leveraging existing and emerging scientific literature and multiple databases
- Build cooperative relationships with potential expert resources as required. Partner with a wide variety of internal and external resources to deliver against targeted consumer benefits
- Partner internally and externally to implement portfolio transformation strategies to achieve human sustainability goals and metrics
- Provide technical leadership to R&D and business teams by contributing nutrition science guidance on technical issues affecting business decisions
- Travel to conferences, meet with academics, etc., as required

Job Requirements

- M.S. or Ph.D. preferably in Nutritional Science or closely-related field with 5-7 years food or beverage consumer products experience, academic experience that blends science and business or a combination of both
- Demonstrated understanding of human nutrition; nutrient requirements; nutritional status; scientific information gathering, synthesis, and communication; clinical study design and interpretation.
- Creativity, Innovation, excellent communication skills
- Proven collaborative, leadership and influencing style
- Ability to manage and help technical and non-technical partners understand nutritional complexities across R&D, business partners and corporate functions.
- Strong interpersonal, teamwork, and communication skills demonstrated by the ability to positively influence within and outside the organization
- Proficient in providing thought leadership on both strategic and tactical aspects of projects
