Message From the President:
Patrick J. Stover, PhD

I am pleased to report that we have announced the creation of an Advisory Committee that will focus on ensuring the public trust in academic and professional scientific societies through best practices in scientific rigor and transparency. A press release announcing the committee is available, as well as a list of committee members.

Over the next year, the Advisory Committee will identify best practices to allow effective collaborations among academia, government and the private sectors while ensuring public trust. This initiative will help ensure that ASN's activities are transparent, advance research, and maintain scientific rigor. I welcome your comments on this important initiative; please feel free to email me at pjs13@cornell.edu.

Finally, volunteers are at the heart of ASN's work - providing leadership and shaping our many programs. We're looking to recruit dedicated members to add to our diverse and multidisciplinary cadre of volunteer leaders. Please complete the Call for Volunteers Survey to indicate your interest in serving as a volunteer; incoming ASN President Dr. Marian Neuhaus (2016-17) will consider your requests as she makes appointments over the next several months.

Patrick J. Stover, PhD
ASN President

Upcoming Deadlines & Events

February 23. Experimental Biology hotel reservations deadline. The ASN HQ hotel is the San Diego Hilton Bayfront.

March 1. Experimental Biology early registration deadline.

March 14-18. John Minler Practicum, Rockville, MD.

April 2-6. ASN Scientific Sessions & Annual Meeting at EB 2016. San Diego, CA.

Clinical Nutrition Internship 2016
The American Society for Nutrition is accepting applications for the 2016 Clinical Nutrition Internship Program. Targeted to medical students, this program is designed to increase the role of nutrition in the practice of medicine, medical research, health promotion, and disease prevention by providing a unique combination of educational experiences to medical students. This program is meant to supplement nutrition education not always present in the medical school curriculum that ASN believes is vital. This internship is specifically for those that do not have a degree in nutrition looking to incorporate nutrition education.

With Appreciation for ASN Journal Reviewers

Many thanks to the more than 1,890 individuals who served as manuscript reviewers for The American Journal of Clinical Nutrition (AJCN), The Journal of Nutrition (JN) and/or Advances in Nutrition (AN) in 2015. We greatly appreciate their willingness to share their time and expertise in support of the ASN journal peer review process. Anonymous, conscientious, fair, and timely peer review is the lifeblood of scholarly publishing. Reviewers are formally recognized in the January 2015 issues of AJCN, JN, and AN, and a combined list of ASN journal reviewers is posted on the ASN website.

Upcoming Meetings

ASN’s Scientific Sessions and Annual Meeting at EB 2016

Mark your calendars for April 2-6, 2016 for ASN's 80th Scientific Sessions & Annual Meeting at Experimental Biology, returning to San Diego, CA. Make sure to register and book your housing as soon as possible. Below are some exciting highlights to look forward to at this year's meeting.

Opening Session and Discussion Scientific Rigor in the Nutrition Research Landscape (Sunday, April 3, 10:30 am)

Much attention has been focused on the quality of nutrition research as well as the impact of private funding. Join ASN, the Canadian Nutrition Society, ILSI North America and the National Academy of Sciences’ Food and Nutrition Board as we move towards a common understanding that advances nutrition research while maintaining the public’s confidence in the nutrition science community and research that seeks to improve public health.

New Activities for Faculty Members

Based on member feedback, additional sessions for faculty members have been added. These include an oral session, Innovations in Undergraduate, Graduate and Medical Nutrition Education (Sunday, 8:00 am), the Association of Nutrition Departments and Programs Forum, Research and Partnership Opportunities within the National Nutrition Research Roadmap (Tuesday, 3:00 pm) and a workshop, Transdisciplinary Training in Childhood Obesity Prevention: Approaches, Successes and Challenges (Sunday, 3:00 pm).

Events to Honor Students’ Achievements

ASN's various student and young professional competitions have always been a program highlight. Among these is the Emerging Leaders in Nutrition Science Poster Competition being held to recognize the very best research submitted by students and young investigators to ASN's Scientific Sessions.

Reserve your table today for ASN's University Mixer and Opening Night Reception!

This highly anticipated networking event kicks off the start of ASN's Scientific Sessions and Annual Meeting. Departments and programs in nutrition, food science and public health can purchase a table to spread awareness of opportunities, welcome alumni and honor awardees. Reserve your table today!

View the Schedule at a Glance for a full listing of sessions and networking activities.
Public Policy News

President Releases Fiscal Year 2017 Budget

President Obama released his fiscal year 2017 budget on February 9, in which he emphasizes the need to look forward to address challenges by accelerating the pace of American innovation. The proposed budget includes efforts to "drive critical medical breakthroughs," supporting a new "moonshot" to cure cancer headed by Vice President Biden. It also supports the Precision Medicine Initiative to accelerate the development of customized treatments that take into account a patient's genes, environment, and lifestyle, as well as the BRAIN Initiative, which will dramatically increase our understanding of how the brain works.

Visit the ASN website to read the entire policy update.

Journal Highlights

Advances in Nutrition

The January 2016 issue of Advances in Nutrition, ASN's international review journal, features these review analyses:

How much sugar is too much for good dental health? Paula Moynihan reviews the WHO's conditional recommendation, which suggests a further reduction in the intake of free sugars from less than 10% of energy intake to less than <5%. She also notes that a broad range of public health strategies is required to successfully reduce the intake of free sugars to protect both dental and general health.

What can we do to get children to eat more vegetables? Jennifer O. Fisher et al. summarize the research needed to enable us to craft more effective messages, devise strategies for parents, develop action in the community, and modify government policies and programs. First and foremost, the authors conclude that what happens in the home is key to increasing children's vegetable consumption.

The American Journal of Clinical Nutrition: Editor's Pick

What makes some people order that delicious slice of pie after finishing a large meal, whereas others decline because they are simply too full to eat anything else? Growing evidence suggests that these differences among people are due, at least in part, to variation in brain activity. In a study using a clever "twin design," researchers used MRI technology to map brain activity in response to being shown images of high-calorie, desirable foods-comparing what happens in genetically identical twins to what happens in unrelated individuals. Their findings suggest that inherited, genetic factors influence at least some of the brain's responses to food cues and may help explain why some of us just can't resist ordering that decadent dessert.
The Effect of Long-term Supplementation of Green Tea Extract on Adiposity and Bone Mineral Density: A Randomized Trial of Overweight and Obese Menopausal Women

Previous research on green tea consumption has suggested a link with modest weight loss, but these studies have been confounded by the inclusion of caffeine, which is a well known stimulator of short-term energy expenditure. Dostal et al. conducted a 12 month randomized placebo-controlled trial in overweight postmenopausal women to look at the effects of caffeine-free green tea extract on body composition and bone mineral density. Green tea extract supplementation did not significantly alter weight, adiposity, or bone mineral density compared to placebo. These results provide evidence that green tea extract alone does not substantially alter weight or body fat in the absence of changes in diet or physical activity. Full summary.

Human Milk Oligosaccharides and Synthetic Galactosyllactosaccharides Contain 3’, 4, and 6’-galactosyllactose and Attenuate Inflammation in Human T84, NCM-460, H4 Cells, and Intestinal Tissue Ex Vivo

Breastfeeding is well known to reduce rates of infection and inflammatory disease in infants likely due to the many immunoprotective compounds found in breast milk. Newburg et al. investigated the anti-inflammatory properties of a recently discovered group of human milk oligosaccharides known as galactosyllactoses. Researchers exposed several intestinal cells lines to a variety of inflammatory compounds and pathogens including Salmonella and Listeria. Galactosyllactoses reduced the release of several inflammatory chemokines suggesting that they may play a role in protecting the gut from infection and inflammatory damage. Full summary.
